**REFORM, COMMERCIAL AND ANTITRUST**  
**LAW**

---

I would like to thank Subcommittee Chairman Bachus, Ranking Member Cohen and the members of this Subcommittee for the opportunity to testify on H.R. 982, the “Furthering Asbestos Claim Transparency (FACT) Act of 2013.” My name is Elihu Inselbuch. I am a member of the firm of Caplin & Drysdale, Chartered in New York, and much of my work over the last 25 years involved representing victims’ rights in asbestos bankruptcy proceedings. Specifically, and most relevant for purposes of this hearing, I was first retained to act for the Asbestos Claimants' Committee in the Manville reorganization, and I have extensive experience in asbestos creditors' rights litigation. I’ve represented the interests of claimants in a number of large bankruptcies and class actions, including Johns Manville, Jim Walter Corp., Raytech Corporation, Babcock & Wilcox, Pittsburgh Corning, Armstrong World Industries, G-I Holdings, and W.R. Grace. As a result of this work, I’ve become intimately familiar with the horrors of the asbestos-disease epidemic and this country’s systematic attempts to grapple with how to compensate such large numbers of victims over decades of disease.

## **I. Summary**

H.R. 982, the FACT Act of 2013, is the latest, but not the first, attempt by asbestos defendants to minimize and ultimately extinguish their liability in the tort system. These defendants — which are the only beneficiaries of this bill—are the same asbestos companies who have already been determined liable for recklessly exposing their workers and their workers’ families to their deadly products. Had these companies shared the information they knew about the dangers of asbestos, or at the very least, provided adequate safety gear, countless lives would have been saved and I would not be sitting before you here today.

What many people do not realize is that the asbestos-disease epidemic is the longest-running public health epidemic in our history that kills thousands of Americans every year and will continue to do so for many decades to come. For more than eighty years, corporations that produced and distributed asbestos-containing products — and their insurance companies — have attempted to avoid responsibility for the deaths and injuries of millions of American workers and consumers caused by those products. Since before 1930, these corporations have hidden the dangers of asbestos and lied about their knowledge of those dangers, lobbied to make it harder for workers to sue for their injuries, fought to weaken protective legislation, and to this day continue to deny responsibility.

The FACT Act is yet another example of their tactics, designed only to delay payments to victims and deny accountability. The bill is predicated on a fundamental misunderstanding of why the asbestos trust mechanism was created and how it works.

## **II. Asbestos Disease And Litigation**

### **a. General Background**

Asbestos is a naturally occurring mineral that was widely used during the twentieth century for industrial, commercial, and residential purposes.<sup>1</sup> Because of its tensile strength, flexibility, durability, and acid- and fire-resistant capacities, asbestos was used extensively in industrial

settings and in a wide range of manufactured goods.<sup>ii</sup> Diseases caused by exposure to asbestos kill thousands of Americans every year because asbestos is inherently dangerous. Whenever materials containing asbestos are damaged or disturbed, microscopic fibers become airborne, and can be inhaled into the lungs and cause disease.<sup>iii</sup> The most serious asbestos-related disease is mesothelioma, a virulent cancer of the lining of the lungs that can be caused by even a short period of exposure, and is inevitably painfully fatal, often within months of diagnosis.<sup>iv</sup> Other illnesses caused by asbestos include lung cancer, asbestosis, and pleural diseases.<sup>v</sup> The bulk of asbestos liabilities are for mesothelioma and other asbestos-related cancers.

Tens of millions of American workers have been exposed to asbestos; more than 27 million people were occupationally exposed between 1940 and 1979.<sup>vi</sup> Millions of those exposed have fallen ill, or will fall ill in the future; many have died and many more will die as a result of their exposure. Manufacturers — but not workers — were for decades well aware of the significant health hazards posed by asbestos, but production and distribution of new asbestos-containing products continued virtually unabated until the 1970s,<sup>vii</sup> and in some cases until 2000.<sup>viii</sup> Asbestos diseases have long latency periods; a person exposed while working may not fall ill for forty years or fifty years, or even longer.<sup>ix</sup> Thus, even though asbestos production and use has declined, the epidemic of asbestos-related illnesses is expected to continue for decades into the future.

By the early 1900s, medical scientists and researchers had uncovered “persuasive evidence of the health hazards associated with asbestos.”<sup>x</sup> Manufacturers and insurers knew this, and even as evidence mounted they continued to hide these findings and deny responsibility. In 1918, a Prudential Insurance Company report revealed excess deaths from pulmonary disease among asbestos workers, and noted that life insurance companies generally declined to cover asbestos workers because of the “assumed health-injurious conditions of the industry.”<sup>xi</sup> For decades, asbestos manufacturers were well aware of the dangers of asbestos, and deliberately did not protect their workers or the end-users of their products. In a thorough discussion of the history of asbestos use and litigation in the United States, District Judge Jack Weinstein noted:

Reports concerning the occupational risks of asbestos, including the incidence of asbestosis and lung cancer among exposed workers, have been substantial in number and publicly available in medical, engineering, legal and general information publications since the early 1930s. There is compelling evidence that asbestos manufacturers and distributors who were aware of the growing knowledge of the dangers of asbestos sought to conceal this information from workers and the general public.<sup>xii</sup>

As workers and others who had been exposed to asbestos began to get sick in large numbers, litigation began in the 1960s. Of particular importance was evidence uncovered by plaintiffs’ attorneys — “[t]hrough persistence, vigorous discovery and creative efforts” — establishing that “manufacturers . . . knew that asbestos posed potentially life-threatening hazards and [chose] to keep that information from workers and others who might be exposed.”<sup>xiii</sup> Angered by evidence that information about the dangers of asbestos had been suppressed, juries began awarding large punitive damages.<sup>xiv</sup> As a result of the plaintiffs’ success in asbestos suits in the tort system, and the overwhelming number of claims, the point was reached long ago where most workers who

fall ill from exposure to asbestos “recover substantial sums through settlement or jury awards.”<sup>xv</sup>

### **b. Evolution Of Filings In The Tort System**

Asbestos personal injury litigation began in earnest in 1973 after the Fifth Circuit’s decision in the benchmark case of *Borel v. Fibreboard Paper Products Corp.*<sup>xvi</sup> *Borel* established that manufacturers and distributors of asbestos products are liable to persons injured as a result of using their products because of their failure to warn regarding the danger of those products.<sup>xvii</sup> Recognizing that many persons have been exposed to a variety of asbestos products made by a large number of manufacturers, under circumstances that make it impossible to ascribe resulting disease to one particular product or exposure, the *Borel* court found that each and every exposure to asbestos could constitute a substantial contributing factor in causing asbestos diseases, and that each and every defendant who contributed to the plaintiff’s aggregate asbestos exposure is legally responsible for the plaintiff’s asbestos-related injuries.<sup>xviii</sup> The overwhelming majority of courts throughout the country have accepted the legal principles set out in *Borel*.<sup>xix</sup>

With this development in the law, the thousands of people killed and maimed by exposure to asbestos and asbestos-containing products began to sue the manufacturers and distributors of those products. So many people had been injured or killed by asbestos that twenty-five thousand lawsuits were commenced in the next decade,<sup>xx</sup> and the number of lawsuits continued to rise dramatically through the 1990s.<sup>xxi</sup>

## **III. The Creation Of The Asbestos Trust System**

Epidemiology makes clear that thousands of people each year for decades to come will fall ill as a result of asbestos exposure, and experience teaches us that most will seek compensation from the manufacturers of the asbestos products that caused their injuries. Attempts to achieve settlements that would provide for the treatment and payment of these future claims are hampered by the difficulty of ensuring that any such settlement agreements would “provide for all future claimants who come forward, so that all who are eligible for compensation are properly compensated and all who are required to pay compensation have taken into account this responsibility in their business planning.”<sup>xxii</sup> The overwhelming numbers of people who have been made sick and who are dead or dying from asbestos exposure and the large numbers of future claims have led dozens of asbestos manufacturers to choose bankruptcy to deal with these claims. Asbestos personal injury trusts were created during these bankruptcies to ensure that the tens of thousands of people who are currently sick and dying and the tens of thousands more who science tells us will sicken and die in the future as a result of their asbestos exposure can receive some compensation for their injuries.

### **a. Manville**

The Johns-Manville Corporation was the largest manufacturer and distributor of asbestos products in the twentieth century. Manville officers and directors knew of the dangers of asbestos since at least 1934, and kept this knowledge secret to prevent workers from learning that their exposure to asbestos could kill them. As evidence of Manville’s responsibility became

known, it was faced with tens of thousands of lawsuits, and, to deal with this liability, filed its Chapter 11 petition for reorganization in August of 1982.<sup>xxiii</sup> To solve the problem of future claims, the Manville plan of reorganization pioneered the use of a trust dedicated to the resolution and payment of asbestos claims. The Manville Trust assumed the debtors' present and future asbestos liabilities, and all asbestos claims against the debtors (including those in the future) were directed to the Trust by an injunction — a “cornerstone” of the plan<sup>xxiv</sup> — channeling all asbestos claims from the reorganized Manville Corporation to the Manville Trust. The channeling injunction was issued pursuant to the bankruptcy court's general equitable powers.<sup>xxv</sup>

## **b. Congress Acts**

A substantial portion of the assets conveyed to the Manville Trust from which it would pay claims were equity and debt interests in the reorganized Manville Corporation, which, shorn of its asbestos liabilities, was a profitable forest products and industrial company. The public markets were skeptical about the validity of the channeling injunction, depressing the value of the Trust's holdings. To alleviate concerns about the *Manville* injunction, and to foster reorganization of asbestos debtors, in 1994 Congress enacted Bankruptcy Code Section 524(g), which statutorily validates the trust and channeling injunction mechanisms pioneered in the *Manville* case.<sup>xxvi</sup> As Senator Brown explained, “[w]ithout a clear statement in the code of a court's authority to issue such injunctions, the financial markets tend to discount the securities of the reorganized debtor. This in turn diminishes the trust's assets and its resources to pay victims.”<sup>xxvii</sup>

Section 524(g) obviates due process concerns with respect to future claimants by providing for appointment of a legal representative to protect their interests.<sup>xxviii</sup> The statute gives a debtor the right to propose and have confirmed a plan that will create a trust to which all of the debtor's present and future asbestos personal injury liabilities will be transferred, or channeled, for post-confirmation claims evaluation and resolution.<sup>xxix</sup> The debtor is freed of asbestos claims, in return for funding the trust, and present and future asbestos claimants have recourse to the assets of the trust.

There were not many other asbestos-driven bankruptcies of note in the 1990s — the largest was likely the bankruptcy of the Celotex Corporation and Carey Canada Incorporated (a subsidiary that had been engaged in the mining, milling, and processing of asbestos fiber), which filed for bankruptcy protection in 1990. The Celotex Asbestos Settlement Trust was formed in 1998.

This changed in the next decade, however. In 2000, there were sixteen asbestos personal injury trusts; by 2011, there were nearly sixty, with trusts formed by many large asbestos defendants, including Armstrong World Industries, the Babcock & Wilcox Company, Halliburton (Dresser Industries), Owens Corning, and United States Gypsum.<sup>xxx</sup>

#### IV. Asbestos Trusts And Victim Compensation Today

According to the GAO, as of 2011, there were sixty asbestos personal injury trusts.<sup>xxxix</sup> Most of these trusts work the same way. Pursuant to the mandate of 11 U.S.C. § 524(g), an asbestos trust must treat all similar claimants in substantially the same manner.<sup>xxxix</sup> When it is formed, therefore, a trust will project the number of claims it expects to receive and determine the historic settlement value of those claims — what its predecessor would have paid to settle the claims had they been brought in the tort system.<sup>xxxix</sup> The trust has fixed assets that will be insufficient to pay the full historic settlement value of all claims; it therefore sets a payment percentage, and each present and future claimant is paid the liquidated value of his or her claim discounted by the payment percentage.<sup>xxxix</sup> The functioning of the trusts approximates the process through which lawsuits in the tort system are settled.

An asbestos trust is governed by its trust agreement and the trust agreement exhibits, which include a document containing a series of trust distribution procedures (“TDP”), approved by the bankruptcy court when confirming a plan of reorganization providing for creation of the trust.<sup>xxxix</sup> The TDP sets forth procedures for the administration of the trust and establishes a process for assessing and paying valid claims. The TDP also includes the settlement amounts that the trust will offer a claimant with an asbestos-related disease who meets the exposure and medical criteria set out in the TDP, and thus can presumptively establish the trust’s liability.<sup>xxxix</sup> Claimants who believe that they are entitled to a larger payment from a trust because, for example, they have higher than normal damages, or manifested illness at an early age, can reject the standard settlement and seek “individual review” of their claims, which may or may not result in a higher settlement.<sup>xxxix</sup> In either case, the trust is designed to value claims at the tort-system settlement share of its debtor — not the joint and several total value of the claim against all responsible parties that would be fixed by a jury.

For a claimant to recover from an asbestos trust, he or she must provide medical evidence demonstrating that the claimant has an asbestos-related disease, and evidence satisfactory to the trust that it has responsibility for the claimant’s injuries.<sup>xxxix</sup> The evidence required depends on the nature of the claimant’s disease. A claimant with mesothelioma, for example, must provide a diagnosis of that disease by a physician who physically examined the claimant, or a diagnosis by a board-certified pathologist or a pathology report prepared at or on behalf of an accredited hospital, as well as appropriate evidence of product identification as noted above.<sup>xxxix</sup>

These criteria are combined with audit programs to ensure that the trusts do not pay fraudulent claims.<sup>xl</sup> The trusts do not pay every claim that is filed, but routinely reject those that are deficient.<sup>xli</sup> And while there is no guaranteed method to completely prevent attempts to abuse the trust system, there is simply no evidence that such practices are widespread. Moreover, the simple fact that a claimant sues a solvent defendant while filing claims against (and potentially receiving payment from) multiple trusts is not significant. Most asbestos victims were exposed to asbestos-containing products from multiple defendants and, unless there is an adjudication of liability and award and payment of damages, each defendant or trust remains responsible.

The asbestos personal injury trusts replace insolvent defendants, and are a settlement vehicle. The trusts are not tort defendants; rather, they settle claims created by the liability of their

insolvent predecessors. Unlike solvent defendants, a trust does not contest liability when a plaintiff proves exposure to products for which the trust is responsible.

Given the fact that the trusts pay a percentage of the settlement value of a claim, the amounts being paid to claimants vary widely from trust to trust, but are low compared to results in the tort system. The GAO survey found the median payment percentage across trusts is 25%.<sup>xlii</sup> The scheduled values for a claim, which reflect each defendant’s historical settlement averages, vary widely as well, reflecting the share of total settlements paid by each defendant in the tort system. The following table shows some of these results.

**TABLE 1 — Sample Trust Recoveries<sup>xliii</sup>**

Trust	Payment %	Scheduled Value — Mesothelioma	Paid to Claimant
AWI	20%	\$110,000	\$22,000
Burns & Roe	25%	\$60,000	\$15,000
B&W	7.5%	\$90,000	\$6,750
Fibreboard	7.6%	\$135,000	\$10,260
Kaiser	35%	\$70,000	\$24,500
Manville	7.5%	\$350,000	\$26,250
OC	8.8%	\$215,000	\$18,920
USG	20%	\$155,000	\$31,000

As shown, the trusts do not have the funds to pay the full scheduled value to all present and future claimants, and most recoveries are quite small. For example, recovering from all of the trusts listed above would yield a claimant roughly \$155,000, a very small portion of the damages routinely awarded by juries to mesothelioma victims.

**V. Myths And Facts About Asbestos: What Asbestos Companies Want You To Believe**

**a. The Myths**

Most recently, these asbestos litigation defendants have created a myth of plaintiff wrongdoing — which they call “double-dipping” — as a pretext for so-called settlement trust “transparency” legislation. This is not what it pretends to be — an effort to make the tort system more responsive — but merely their latest affirmative effort to evade responsibility for their own malfeasance.

It is a fundamental principle of American tort law that an injured person can recover damages from every entity that has harmed him, and as litigation progresses can settle his claim against one or another of the wrongdoers as both parties may agree. His compensation for his injury is, then, the sum of all the settlements reached. Only in the very rare case that goes to verdict, judgment, and payment (where the payment amount is reduced by an amount determined by the relevant state law to account for payments by settling co-defendants or bankruptcy trusts), is the victim’s claim fully satisfied. Only if after verdict, judgment, and payment were a plaintiff to recover from a bankruptcy trust could he be overcompensated and be said to have “double-

dipped.” Out of the millions of trust claims filed and considered by trusts since 1988, defendants have identified just one case where a trust claim was filed by a plaintiff after judgment and paid by a trust. In that case the judgment was on appeal and had not yet been paid when the trust claim was filed. Thus, despite asbestos companies’ claims, there is no “double-dipping” problem that needs to be fixed.

To fix this non-problem, front organizations for asbestos defendants have proposed “transparency” laws and regulations at both the federal and state levels. One such law was recently adopted in Ohio. While these proposals masquerade as mechanisms designed to advance evenhanded justice, they are, in fact, obvious efforts by asbestos litigation defendants to do an end-run around uniform rules of discovery in the tort system and reverse principles of tort law established hundreds of years ago, including the principle that the plaintiff is the master of his case and may choose which of multiple wrongdoers to sue and with which to settle.

These front organizations include the American Legislative Exchange Council (“ALEC”) and the U.S. Chamber of Commerce Institute for Legal Reform. ALEC is funded by a variety of corporations, including those facing liability for injuries and deaths caused by their asbestos-containing products. ALEC is also busy advancing the interests of the tobacco industry, health insurance companies, and private prisons — the latter particularly through legislation requiring expanded incarceration of immigrants. While ALEC purports to be a nonprofit, it is little more than a group of corporate lobbyists who write model legislation and then fund free trips for state legislators to luxury resorts, seeking to have them introduce model anti-civil justice legislation in their home legislatures.<sup>xliiv</sup> Outrageously, ALEC is funded as a tax-exempt charity, although the IRS has recently received formal complaints challenging the group’s nonprofit tax status on the basis that ALEC’s primary purpose is to provide a vehicle for its corporate members to lobby state legislators and to deduct the costs of such efforts as charitable contributions.<sup>xlv</sup> In addition, ALEC coordinated the state effort through introduction of the “Asbestos Claims Transparency Act,” which seeks to further limit the ability of victims to recover.<sup>xlvi</sup>

## **b. The Facts**

The supposed “transparency” sought by asbestos defendants is centered on claims plaintiffs make against trusts established to compensate asbestos victims. These asbestos personal injury trusts were created to resolve the bankruptcies of asbestos defendants overwhelmed by their provable tort liabilities to the people they injured. The trusts are crafted to distribute settlement payments to individuals injured by their bankrupt predecessors’ products in amounts reflecting the historic tort system settlement share paid by the relevant predecessor. Because of the hopeless insolvency of their predecessors, the trusts are only able to pay a small percentage of that historical settlement share to each harmed claimant, present and future.

### **i. There Is No “Double Dipping”**

Supporters of these recent proposals claim that “transparency” is necessary to prevent “double-dipping” on the part of plaintiffs — that is, fraudulent multiple recoveries for the same injury, through lawsuits against remaining solvent defendants and trust claims. This assertion is deliberately misleading. Because of the ubiquitous presence of asbestos in industry, multiple

companies are almost always at fault for asbestos-related diseases and deaths. Think of the shipyard worker, for example, assisting in the repair of countless U.S. Navy warships. The asbestos-containing products which were causes of his injury included boilers, pipe and thermal insulation, gaskets, and many others. A person so injured can legally recover from every company responsible, including both those he sues in the tort system and the trusts that stand in the shoes of bankrupt defendants. The current efforts by ALEC and its members are nothing more than an attempt to shift solvent defendants' share of responsibility to the insolvent defendants and leave the innocent victims with the resulting shortfall in recovery.

## **ii. Asbestos Defendants Can Already Receive Relevant Information From The Trusts**

It is important to note that asbestos trusts are created under state law as private trusts as part of the resolution of a bankruptcy. Their funding reflects an overall settlement among the debtor, the debtor's other creditors and shareholders and the asbestos claimants of the debtor's present and future asbestos liabilities, negotiated and sometimes litigated pursuant to the rules of Chapter 11. The trusts are funded entirely with private funds provided by the relevant debtor and, in many cases, the debtor's insurers; no government funds are involved. Following their formation, the asbestos trusts operate in the same manner as a company that is reorganized as part of a bankruptcy. They are governed by applicable state law and their trust agreements, which are public documents approved by a federal bankruptcy judge. Solvent asbestos defendants remaining in the tort system are currently able to learn all information relevant to a claim against them, including information about a victim's trust claims, under state discovery rules.

The pretextual nature of these bills is particularly clear when one considers that the information that "transparency" legislation seeks to make public is already available to defendants who need it. Asbestos personal injury litigation has been going on for more than thirty years. Many of the same lawyers are still involved; those that represent defendants have witnessed all the discovery that plaintiffs — hundreds of thousands of plaintiffs — have produced, and have been at the trials. It is highly likely that there are very few job sites for which defendants do not have a library of data demonstrating which other defendants' products were present.

Often, this information does not come from plaintiffs. An individual plaintiff rarely knows what corporation provided the asbestos products present at a site where he worked. He is usually a sick or dying worker, or the widow of such a person, and he (or his widow) will only know where he worked and the kinds of materials he worked with, though not necessarily the materials his co-workers worked with. Proof of the identity of the supplier of the asbestos at those locations usually comes through discovery of suppliers and sales records, and depositions of co-workers, not the plaintiffs' memories. And the evidence is widely available. Without it, plaintiffs' lawyers would not have proved liability so many times that corporations worth billions of dollars had to file for bankruptcy protection.

For defendants to claim that transparent claim filings would solve a problem, therefore, is false. Should a defendant wish to lay off liability on an absent insolvent tortfeasor, the tort system allows it to do so. In addition to their institutional knowledge, the remaining defendants in the

tort system have the same discovery devices available to them as plaintiffs do, and can prove the fault of the absent insolvent tortfeasors as easily as plaintiffs originally could. Defendants can obtain, for example, the plaintiffs' work history, employer records, and depositions of the plaintiffs and co-workers to determine the asbestos-containing products to which the plaintiffs were exposed. Defendants can also consult the trusts' websites, which generally contain searchable lists of sites where the products for which the trusts have responsibility were concededly used, and which are easily compared to a plaintiff's work history.<sup>xlvii</sup>

### **iii. Asbestos Defendants Are Not Made To Pay More Than Their Fair Share**

States have different tort liability regimes, a situation not caused by or related to the existence of asbestos trusts. The principal difference between so-called several-only and joint-and-several jurisdictions is whether the plaintiff or defendant bears the risk of another responsible tortfeasor's inability to pay. An individual defendant's share of the liability for an injury is its "several" liability. In states that apply several-only liability rules, when a responsible defendant cannot pay, the plaintiff cannot recover that defendant's liability share from co-defendants; the plaintiff bears the loss.<sup>xlviii</sup> With joint-and-several liability, each defendant the jury finds at fault can be required to pay the entire judgment and then seek contribution from others jointly responsible, whether another tort system defendant or a trust, bearing the risk that one or more of those jointly responsible cannot pay. The nature of each state's regime is a public policy choice of its legislature.

Underlying all of these systems is the fact that each defendant is assigned a share of liability. When verdicts are molded, courts typically reduce the verdict amount before entering judgment so as to reflect settlement payments a plaintiff has recovered from other tort system defendants and trusts.<sup>xlix</sup>

## **VI. H.R. 982, The "FACT Act": A Solution In Search Of A Problem**

The FACT Act's provisions have no intended consequences other than to grant solvent asbestos defendants new rights and advantages to be used against asbestos victims in state court and to add new time-consuming burdens to the trusts. Further, the bill is intended to help defendants skirt state laws regarding rules of discovery and joint and several liability. H.R. 982 would require the trusts to publically disclose extensive, individual and personal claim information, including information about a victim's exposure and work history, and would allow asbestos defendants to demand any additional information from the trusts at any time and for virtually any reason.

Under Section 2 of the bill, Sections 8(A) and 8(B) operate together to put burdensome and unnecessary reporting requirements on the trusts, giving asbestos defendants informational advantages while also slowing down the ability of trusts to pay claims. Section 8(A) of the bill would force trusts to publicly report highly personal, individual claimant data. According to the bill, this would include "the name and exposure history of, a claimant and the basis for any payment from the trust made to such claimant." And, if the information reported pursuant to this

provision were not enough for asbestos defendants to use to deny liability, section 8(B) requires the trusts to “provide in a timely manner *any* information related to payment from, and demands for payment from, such a trust, subject to appropriate protective orders, to *any party to any action* in law or equity if the subject of such action concerns liability for asbestos exposure.” (Emphasis added.) Section 3 of the bill makes the bill’s provisions retroactive and would force every trust to look at and report on every claim it ever paid.

First, the bill would slow down the trust process such that many victims could die before receiving compensation since victims of mesothelioma typically only live for 4 to 18 months after their diagnosis.<sup>1</sup> The bill’s new burdens will require the trusts to spend time and resources complying with these requirements, causing trust recoveries to be delayed.

In addition, the bill overrides state law regarding discovery/disclosure of information. State discovery rules currently govern disclosure of a trust claimant’s work and exposure history. If such information is relevant to a state law claim, a defendant can seek and get that information from the plaintiff according to the rules of a state court. What a defendant cannot do, and what this bill would allow, is engage in fishing expeditions for irrelevant information that has no use other than to delay a claim for as long as possible.

It is also important to note that the bill only changes what the trust must report with respect to an asbestos victim; the bill says nothing of the right of asbestos defendants to demand confidentiality. A typical asbestos defendant who settles a case in the tort system demands confidentiality as a condition of settlement in order to ensure that other victims do not learn how much the defendant paid. Trust payments represent settlements of former asbestos defendants. The remaining asbestos defendants now want the trusts to disclose specific settlement amounts and other information that they themselves do not provide and that the bankrupt asbestos defendants who created the trusts did not provide when they were defendants in the tort system.

Furthermore, the bill seemingly ignores the fact that much trust information is already public. Trusts already disclose far more information than solvent defendants do about their settlement practices and amounts – the settlement criteria used by a trust and the offer the trust will make if the criteria are met are publicly available in the Trust Distribution Procedures for that trust. Trusts also file annual reports with the Bankruptcy courts and often publish lists of the products for which they have assumed responsibility. Ironically, then, the trusts are already far more “transparent” than the solvent defendants who now seek to transform the trusts into discovery clearinghouses for the benefit of those defendants.

Lastly, the bill also ignores the fact that despite trying to find instances of widespread fraud and abuse, there is none. Defendants have no evidence to support their assertions of fraud by plaintiffs. The *Kananian* case, on which they so heavily rely, was an isolated incident, remedied by a state court, involving inconsistent trust claims with respect to a single claimant, one of the millions who have filed claims with asbestos trusts.

## **VII. Asbestos Trust Transparency Legislation Efforts Around the Country — Unnecessary And Unfair**

Asbestos defendants and insurance companies, under the guise of creating increased “transparency,” are introducing proposed legislation in state legislatures to grant solvent asbestos defendants new rights and advantages to be used against asbestos victims in court. Some of these bills would also burden the asbestos trusts with unnecessary reporting requirements, slowing their ability to pay claims, and further draining them of the resources needed to make their already diminished payments. In general, the bills are an attempt to change the rules of the tort system to provide defendants with an advantage, using the existence of the trusts and claims of a lack of “transparency” as a subterfuge.

In Ohio, the legislature recently enacted Ohio H.B. 380 (originally drafted by ALEC), which shifts control of key elements of the plaintiff’s case to defendants while simultaneously shifting significant burdens to the plaintiff. This new Ohio law requires plaintiffs to identify all trust claims and material pertaining to those claims, and update those identifications when new claims are made.<sup>li</sup> Defendants can delay trial and force plaintiffs to make claims against other trusts.<sup>lii</sup> Then, trust claims are presumed to be relevant and discoverable and can be introduced to prove causation and allocate responsibility.<sup>liii</sup>

With a law like Ohio’s H.B. 380, defendants shift their burden — to prove fault on the part of other entities — to plaintiffs, while simultaneously lessening plaintiffs’ control of their own lawsuits. The plaintiff now has to make claims at a defendant’s behest, and then produce claims forms and supporting materials to that defendant, who may be able to use it to get insolvent entities on the verdict sheet. This reduces both the work required by the defendant to acquire evidence and the amount of that evidence it needs to limit its liability. It has nothing to do with reducing fraud; instead, it is a gift to the asbestos industry, which continues to try and avoid accountability and decrease compensation to the victims of its past wrongs — wrongs that it successfully hid for decades, causing years of unwitting worker exposure.

So, in addition to delay — which is always helpful to defendants — the Ohio bill allows a defendant to force the plaintiff to file trust claims, even with limited information. The defendant can use those filed claims as evidence that the plaintiff was exposed to other sources of asbestos — *even if the trusts deny the claims* — and potentially reduce the defendant’s share of liability.<sup>liv</sup> And, as Ohio has a hybrid system of liability, even if each trust claim reduces a defendant’s liability incrementally, the defendant can limit the plaintiff’s recovery by at least those amounts and, if its liability falls below 50%, significantly.

Whether a solvent defendant found liable for a victim’s injuries is liable for the shares of other tortfeasors is a question of public policy. So if a state’s legislature wants to have open debate and change a fundamental rule of public policy, it can, of course, do so. Trust “transparency” subverts that process. Rather than making an informed decision, the Ohio legislature has changed public policy under the guise of so-called transparency, on the basis of largely anecdotal and unproven allegations only for asbestos plaintiffs. It is an effort to facilitate the defense against asbestos claims by forcing plaintiffs to assist in the defendant’s efforts to shift responsibility to other entities.

## VIII. Conclusions

Under the rubric of arguing that “transparency” is necessary to prevent supposed fraud, asbestos companies continue their efforts to change the laws at a state and federal level to receive whatever benefits they can from the existence of the trusts. These laws that seek to enforce disclosure, regulate timing of trust claims, and put additional burdens on these trusts, such as the FACT Act, are unjust and unfair to asbestos victims. These laws were never designed — nor intended — to address fraud in the trust system. Indeed, there is not a scintilla of evidence of any such problem. The real purpose of these laws is to allow solvent defendants to take advantage of the bankruptcies of their co-tortfeasors by shifting to plaintiffs the burdens of the shortfalls caused by the bankruptcies, as well as the burdens of discovery and proof of the bankrupt tortfeasors’ responsibility. These laws are simply the latest stratagem by corporations that produced and distributed asbestos-containing products to avoid responsibility for the deaths and injuries of millions of Americans caused by those products. Legislators should not allow public policy to be hijacked by special interests, and should be vigilant to protect the rights of injured workers and their families.

- xix. See, e.g., *Rutherford v. Owens-Illinois, Inc.*, 941 P.2d 1203, 1214 (Cal. 1997) (plaintiff may meet the burden of proving exposure to defendant’s product caused lung cancer by showing that in reasonable medical probability it was a substantial factor contributing to the plaintiff’s or decedent’s risk of developing cancer); *Jones v. John Crane, Inc.*, 350 Cal. Rptr. 3d 144, 151 (Ct. App. 2005) (“The testimony of the experts provided substantial evidence that Jones’s lung cancer was caused by cumulative exposure, with each of many separate exposures having constituted substantial factors contributing to his risk of injury.”); *John Crane, Inc. v. Linkus*, 988 A.2d 511, 531 (Md. Ct. Spec. App. 2010) (“We conclude that lay testimony describing the amount of dust created by handling the products in question, coupled with expert testimony describing the dose response relationship and the lack of a safe threshold of exposure (above ambient air levels), was sufficient to create a jury question [as to whether the plaintiff’s mesothelioma was caused by defendant’s asbestos-containing products].”); *John Crane, Inc. v. Wommack*, 489 S.E.2d 527, 532 (Ga. Ct. App. 1997) (“Expert testimony showed that it is universally agreed that asbestos fibers are intrinsically dangerous and that the respiration of each fiber is cumulatively harmful . . . .”); *Blancha v. Keene Corp.*, Civ. A. No. 87-6443, 1991 WL 224573, at \*6 (E.D. Pa. Oct. 24, 1991) (every occupational exposure to asbestos “is a substantial factor in bringing about mesothelioma”); *Held v. Avondale Indus., Inc.*, 672 So. 2d 1106, 1109 (La. Ct. App. 1996) (medical evidence showed “no known level of asbestos [exposure] which would be considered safe . . . any [asbestos] exposure, even slight exposures, to asbestos . . . [found to be] a significant contributing cause of the [decedent’s] malignant pleural mesothelioma”); *Mavroudis v. Pittsburgh-Corning Corp.*, 935 P.2d 684 (Wash. Ct. App. 1997) (any

---

exposure to asbestos above background contributes to development of mesothelioma); *Kurak v. A.P. Green Refractories Co.*, 689 A.2d 757, 766 (N.J. Super. Ct. App. Div. 1997) (“Where there is competent evidence that one or a *de minimis* number of asbestos fibers can cause injury, a jury may conclude the fibers were a substantial factor in causing a plaintiff’s injury.”); *ACandS, Inc. v. Abate*, 710 A.2d 944, 989 (Md. Ct. Spec. App. 1998), *abrogated by, John Crane, Inc. v. Scribner*, 800 A.2d 727 (Md. 2002) (expert medical witness testified that “each and every [asbestos] exposure that [the decedent] had was a substantial contributing factor in the causation of his disease”); *Caruolo v. ACandS, Inc.*, No. 93 Civ. 3752 9RWS, 1999 WL 147740, at \*9 (S.D.N.Y. Mar. 18, 1999) *aff’d in part, vacated in part*, 226 F.3d 46 (2d Cir. 2000) (expert medical witness testimony that “[T]here is no way one can say [each asbestos exposure] didn’t contribute. To the contrary. All of his exposures contributed to his mesothelioma, including this one.”).
